

- 1. Database and Table setup
- 2. Create a web form (using HTML)
- 3. Process the web form to store the input into Database (using PHP and SQL Query)

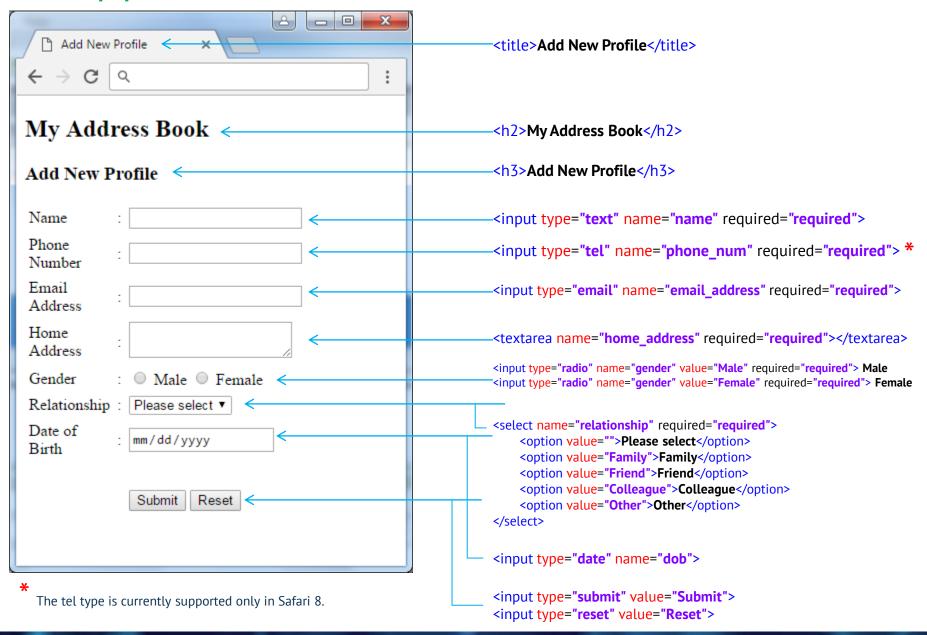

## Create a database, table, fields in PHPMyAdmin

https://web.microsoftstream.com/video/1eabbb3c-738f-435f-a3f9-34b1e4698581

- 1. Run WAMP server.
- 2. Open **PHPMyAdmin** page from the browser.
- 3. Create a database name named "myadddressbook".
- 4. Under "myaddressbook" database, create a table named "contacts".
- 5. Add the fields based on diagram in page 1.

## Connection to the database (conn.php)

- 1. Create a php file in Web Authoring Tool/ Text Editor and name it as "conn.php".
- 2. Empty the preset html codes and replace it with this codes:

### **Insert into the database (insert.php)**

- 1. Create a php file in Web Authoring Tool/ Text Editor and name it as "insert.php".
- 2. Empty the preset html codes (if any) and replace it with this codes:

```
<?php
include("conn.php");
$sql="INSERT INTO contacts (contact name, contact phone, contact email, contact address,
contact gender, contact relationship, contact dob)
VALUES
('$_POST[name]','$_POST[phone num]','$_POST[email address]','$_POST[home address]','$_POST[gender]',
'$ POST[relationship]','$ POST[dob]')";
if (!mysqli_query($con,$sql))
   die('Error: '. mysqli error($con));
else
   echo '<script>alert("1 record added!");
   window.location.href = "view.php";
                                             view.php will be done in next lab
   </script>';
mysqli_close($con);
```

3. View the page in the browser. Key in the data in the form and check your DB if the data recorded.
